Tylosaurus skull – 5.25' long

SIZE COMPARISON CHART – SPECIMENS LESS THAN 6' LONG AVAILABLE IN *Savage Ancient Seas*

Some of the images used herein are actual SAS specimens. Some are other examples or drawings, used to maximize usefulness in visualizing their size. Some of the actual SAS specimen images we have are from oblique angles that do not show their actual size well and so were not used.

The large skulls are designed for display on a stand only. Modern Coelacanth is displayed inside its own cabinet. All others can either be suspended from above or supported on stands.
